

Amendment to Application 09/905,261 : 27th January, 2006**In The Claims:**

Please amend claims : 1, 14, 15, 25, 31, 32

Please note claims remaining cancelled : 2- 3, 10-13, 19-24, 29-30

1. (Currently amended) A mount ~~or mounts~~ releasably adhered to a single sheet of a backing material, ~~the~~ each mount consisting of a single layer of plastic such as PVC and being a mount for mounting a sheet object to glass, and comprising a body having a first surface carrying an adhesive coating which adheres the mount to part of the surface of a sheet object to form a mountable arrangement, and a second surface which secures such a mountable arrangement directly to glass without adhesive, ~~by the well-known "cling" properties of such PVC which has been rendered soft by plasticiser additives.~~
2. (Cancelled)
3. (Cancelled)
4. (Previously presented) A mount according to claim 1, wherein the first and second surfaces of the mount are mutually opposite.
5. (Previously presented) A mount according to claim 1, wherein the first surface of the mount adheres the mount to only a part of one surface of the sheet object to form the mountable arrangement.
6. (Previously presented) A mount according to claim 1, wherein the mount releasably secures the mountable arrangement directly to glass.
7. (Previously presented) A mount according to claim 1, wherein the first or second surface of the mount is flat.
8. (Previously presented) A mount according to claim 1, wherein the mount is flexible.
9. (Previously presented) A mount according to claim 1, wherein the mount is transparent.
10. (Cancelled)
11. (Cancelled)
12. (Cancelled)
13. (Cancelled)
14. (Currently amended) A mount according to claim 1, wherein the thickness of the mount is preferably up to 2 mm.
15. (Currently amended) A mount according to claim 14, wherein the second surface area of the mount is in the range of about 100mm² to 900mm².
16. (Previously presented) A mount according to claim 1, wherein the first or second surface of the mount is square, rectangular, triangular or circular.

17. (Previously presented) A mount according to claim 1, wherein the second surface of the mount does not adhere the mount to paper.
18. (Previously presented) A mount according to claim 1, wherein the mount comprises a pigment material.
19. (Cancelled)
20. (Cancelled).
21. (Cancelled)
22. (Cancelled)
23. (Cancelled)
24. (Cancelled)
25. (Currently amended) A mount for mounting a sheet object to glass, consisting of a single layer of plastic such as PVC and having a first surface carrying an adhesive coating which adheres the mount to a sheet object permanently or releasably to form a mountable arrangement and a second surface which secures such a mountable arrangement directly to glass without adhesive ~~by the well-known "cling" properties of such PVC which has been rendered soft by plasticiser additives.~~; where the first and second surfaces are mutually opposite.
26. (Previously presented) A mount according to claim 25, wherein the first surface carrying an adhesive coating, adheres the mount to only a part of one surface of a sheet object to form a mountable arrangement.
27. (Original) A mount according to claim 25, wherein the first or second surface of the mount is flat.
28. (Original) A mount according to claim 25, wherein the mount is flexible.
29. (Cancelled)
30. (Cancelled)
31. (Currently amended) A mount according to claim 25, wherein the thickness of the mount is preferably up to 2mm.
32. (Currently amended) A mount according to claim 31, wherein the second surface area of the mount is in the range of about 100mm² to 900mm².
33. (Previously presented) A mount according to claim 25, wherein the second surface of the mount does not adhere the mount to paper.
34. (Original) A mount according to claim 25, wherein the first surface of the mount is adhered releasably to a backing material.
35. (Previously presented) A mount according to claim 25, wherein the entire surface of the mount is adhered to less than half of the area of a surface of a sheet object for permitting the said sheet object to be mounted to glass.
36. (Previously presented) A method for securing a first material to a second material, comprising:

- releasably adhering a first surface of a mount to the first material with an adhesive coating carried by the first surface, wherein the mount and first material form a mountable arrangement; and

- securing a second surface of the mount to the second material without adhesive, where the first and second surfaces are mutually opposite and the mount consists of a single layer of plastic such as PVC.

37. (Previously Presented) The method according to claim 36, wherein the first material is a paper-based material.

38. (Previously Presented) The method according to claim 36, wherein the second material is a glass-based material.

39. (Previously Presented) The method according to claim 36, wherein the second material has a smooth surface.

40 (Previously presented) A method for securing a first material to a second material, comprising:

- adhering a first surface of a mount to a part of one surface of a sheet of paper with an adhesive coating carried by the first surface, wherein the mount and the sheet of paper form a mountable arrangement; and

- securing a second surface of the mount to glass without adhesive, where the first and second surfaces are mutually opposite and each mount consists of a single layer of plastic such as PVC.

41. (Previously presented) A mount arrangement for mounting paper to glass comprising:

a plurality of mounts, each mount consisting of a single layer of plastic such as PVC and having a first surface carrying an adhesive coating which adheres the mount to a sheet of paper to form a mountable arrangement, and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.
